

ABSTRACT OF THE DISCLOSURE

Abstract

Primers for synthesizing full-length cDNAs and their use are provided.

- 5 5602 cDNA encoding a human protein has been isolated and nucleotide sequences of 5' -, and 3' -ends of the cDNA have been determined. Furthermore, primers for synthesizing the full-length cDNA have been provided to clarify the function of the protein encoded by the cDNA. The full-length cDNA of the present invention containing the translation start site provides information useful for analyzing the functions of the protein.
